

Mobile E-Prescribing: It's a Win-Win

Reduce Calls, Faxes, and Paper Scripts

Improve Prescription Processing Time

Are paper and phoned-in prescriptions still slowing down your prescription fill times? A mobile e-prescribing solution is available to recommend to your providers that aren't able to send a workflow-friendly e-prescription.

Prescribers no longer have to be at work—or even on a laptop—to send a new script, refill, or renewals to your pharmacy. Prescribers can safely prescribe anytime to support your patients' needs. All they need is a smartphone or tablet and the iPrescribe® app.

Better Prescribing Accuracy

iPrescribe's SmartSuiteSM predictive analytics makes prescribing easier by streamlining prescription writing and reducing prescribing errors. This time-saving feature minimizes the need to search for drugs by displaying commonly prescribed medications with complete sigs based on the patient, diagnosis codes, and historical prescribing behaviors.

Simple, Yet Powerful Medication Management

iPrescribe brings prescribers the full power of e-prescribing with legend drug and controlled substance prescribing, robust medication history data, in-workflow prescription drug monitoring program (PDMP) checking, and at-a-glance allergy alerts in a simple, mobile-friendly app.

- Easily view and approve one or multiple new and renewal prescriptions
- View patient medication histories including PDMP data
- Prescribe legend drugs and controlled substances
- Have prescriptions flow through to medication history to keep patient history up to date
- Reduce prescription clarification calls from pharmacy

Enhanced Patient-Centric Care

iPrescribe will allow you to spend more quality time with your patients by supporting the efficient e-prescribing workflow in your pharmacy.

With iPrescribe, e-prescriptions can be sent to your pharmacy in a few simple clicks from anywhere in the world. Your prescribers will never want to pull out their prescription pad again.
